

CPC 100

Multi-functional Primary Test System for
Substation Commissioning and Maintenance

CPC 100 - The Revolutionary All-in-One Test System

The patented test system replaces numerous individual testing devices and offers new, innovative testing methods. This makes testing with the CPC 100 a time-saving and cost-effective alternative for conventional testing methods. Despite its expansive capabilities, the CPC 100 is very simple to use.

Using the CPC 100, electrical tests on various assets can be performed:

- > Current transformers
- > Voltage transformers
- > Power transformers
- > Power lines
- > High-voltage (HV) cables
- > Grounding systems
- > Rotating machines
- > GIS systems
- > Switchgear and circuit breakers
- > IEC 61850 installations
- > Protection relays

The powerful testing device provides up to 800 A or 2 kV (2 kA or 12 kV with accessories) with up to 5 kVA over a frequency range of 15 to 400 Hz or 400 A DC.

Its compact design (29 kg / 64 lbs) makes it easy to transport and ideal for on-site testing.

Testing with variable frequency

The CPC 100's variable output frequency allows the use of test frequencies different from the mains frequency offering a very effective suppression of mains-related interference. Thus the CPC 100 is able to obtain very accurate results even in extremely noisy environments.

Another critical advantage to performing measurements at different frequencies is the opportunity this provides to gain more information about the asset under test.

The CPC 100 utilizes switched mode amplifiers and frequency shift techniques to generate its variable output frequency.

CPC 100 Product Family - Extended Range of Applications

The CPC 100 covers a lot of different applications in and around substations as well as at the manufacturer's production site.

Extended by a high number of valuable accessories the application range of the CPC 100 is further expanded. Thus it is the ideal instrument for all major applications in the area of primary testing.

Current Transformer Testing

Testing current transformers helps to detect:

Installation related failures:

- > Transportation damages
- > Wiring errors
- > Manufacturing defects

In-service related failures:

- > Degradation of accuracy class
- > Shorted turns
- > Magnetized core
- > Burden failures in secondary circuit
- > Insulation material failures

With the CPC 100 many standard electrical tests for CTs can be performed with one single device saving testing time and labor costs. Additionally, unconventional CTs, like Rogowski coils and IEC 61850 integrated systems, can also be tested.

CT testing with the CPC 100

Supplied from a single phase wall outlet, the CPC 100 can generate up to 800 A AC (2000 A with CP CB2 current booster) for injecting into the CT's primary side and testing its ratio, polarity and burden.

For excitation curve measurement, the CPC 100's output is connected to the secondary terminals of the core. Within an automatic test run, the CPC 100 measures the excitation curve and displays the knee point voltage and knee point current (according to the relevant IEC or IEEE / ANSI standard). The CPC 100 also automatically demagnetizes the CT core after the test.

Using the winding resistance measurement function also allows the user to calculate the accuracy limiting factor (ALF) for protection circuits and the instrument security factor (FS) for metering circuits.

The CT winding resistance and power / dissipation factor can also be measured.

0 - 800 A

0 - 2 kV

Current transformer testing

- > **CT ratio (with burden)**
up to 800 A or up to 2000 A with CP CB2, 5 kVA output power
- > **CT burden**
up to 6 A AC | secondary
- > **CT excitation curve (knee point)**
up to 2 kV AC
- > **Polarity check with CPOL**
up to 800 A or up to 2000 A with CP CB2, 5 kVA output power
- > **Accuracy limiting factor (ALF) test**
- > **CT ratio with voltage**
up to 130 V AC | bushing CTs
- > **CT winding resistance**
up to 6 A DC
- > **CT voltage withstand test**
up to 2 kV AC
- > **CT ratio Rogowski and CT ratio low power**
up to 800 A or up to 2000 A with CP CB2, 5 kVA output power
- > **Power / dissipation factor ($\tan \delta$) test**
up to 12 kV, 300 mA | with CP TD1
- > **IEC 61850 Sampled Values testing**

10 reasons to choose a CPC 100

1. Multi-functionality

With one easy-to-use system you can:

- > Test several assets
(for example CT, VT, CB, power transformer)
- > Test different parts of an asset
(for example core, windings, bushing, insulation)
- > Perform numerous tests
(for example ratio, polarity, burden, excitation current)

1.

2.

3.

4.

5.

6.

7.

8.

9.

10.

CP CB2 (Current booster)

→ 2 kA

With the CP CB2 primary injection of current up to 2 kA can be realized for CT testing.

CP TD1 ($\tan \delta$)

→ 12 kV

For high-voltage CTs, insulation material tests are very important and can be easily done with the CP TD1 accessory.

CPOL (Polarity checker)

The CPOL can check the correct polarity along the different connection points in the secondary wiring by analyzing the sawtooth signal injected into the CT's primary side using the CPC 100.

Voltage Transformer Testing

The majority of VT failures occur due to electrical stresses or manufacturing and installation errors. Typically electrical stresses are caused by:

- > Thunderstorms
- > Ferro-resonances effects
- > Over-voltages

Especially in high-voltage and extra high-voltage installations supervision of the VT insulation system is important to ensure that its dielectric characteristics have not degraded over time.

In case of (re-)commissioning of substations VT circuits should also be checked. Verifying the VT's nameplate data helps to identify damages of the VT or wrong connections.

VT testing with the CPC 100

With a voltage output of up to 2000 V AC the CPC 100 can be used to test VT ratio, polarity and burden.

By injecting voltage into the primary side, ratio can be measured. Thereby the phase angles of high-voltage output and voltage measurement input are also measured. Thus the correct VT polarity can be verified.

Applying voltage to the secondary VT circuits and measuring the load current in amplitude and phase allows the actual burden to be measured, ensuring that it is within the VT's specification data.

Disturbance-free measurement

The VT's secondary signal may be difficult to measure if it is small in amplitude – especially if neighboring parts of the substation are in operation. In case of strong disturbances, the user can select a frequency different to that of the power system and utilizes the "frequency selective measurement" function. Thus only the VT's output signal with this particular frequency is measured while all other signals are filtered out.

0 to 2 kV

With the wide frequency range excellent noise interference suppression can be achieved when testing in the harsh HV environment.

Voltage transformer testing

- > **VT ratio**
up to 2 kV AC | polarity and burden
- > **VT burden**
up to 130 V AC | secondary
- > **VT secondary voltage withstand test**
up to 2 kV AC
- > **Polarity check with CPOL**
up to 2 kV AC
- > **VT electronics**
up to 2 kV AC
- > **IEC 61850 Sampled Values testing**
- > **Power / dissipation factor ($\tan \delta$) test**
up to 12 kV, 300 mA | with CP TD1

10 reasons to choose a CPC 100

2. Variable Frequency

- > Voltage and current injection with variable frequency
- > Suppression of mains-related interference and disturbances
- > Test results at different frequencies provide more detailed information about an asset (for example more information about the insulation condition)
- > Variable frequency testing is necessary for some standardized and advanced diagnostic tests

CP TD1 ($\tan \delta$)

12 kV

For high-voltage VTs, insulation material tests are very important and can be easily done with the CP TD1 accessory.

CPOL (Polarity checker)

The CPOL can check the correct polarity along the different connection points in the secondary wiring by analyzing the sawtooth signal injected into the VT's primary side using the CPC 100.

Power Transformer Testing

Testing to assess the health of power transformers and to diagnose problems is of utmost importance to ensure the long-term and safe operation of these very expensive power assets.

With the CPC 100 power transformers and their ancillary components can be tested:

- > Windings
- > Tap changer
- > Bushings
- > Insulation
- > Core
- > Connection leads
- > Surge arrestors

The comprehensive CPC 100 PC software guides the user through every test and provides support with wiring diagrams.

Testing power transformers – most common electrical tests with one device

The CPC 100 provides an easy and accurate (4-wire connection) winding resistance measurement. Automatic measurement (by using CP SB1) for tapped windings with on load tap changer, speeds up the measurement. The CPC 100 automatically discharges the inductive energy, which makes the measurement safe.

For measuring ratio and excitation current, the CPC 100 provides a 2 kV output, delivering 2500 VA. The test voltage is generated digitally and the current is automatically measured within the CPC 100. This makes the measurement highly accurate, easy to set up, fast and safe.

For power / dissipation factor (PF / DF) measurement of power transformers and bushings, the CPC 100 is combined with the CP TD1. Measuring this factor over a broad frequency range – in addition to mains frequency – helps to better assess the insulation condition, for example detect whether the cellulose or the oil is contaminated by moisture.

0 to 2 kV

10

The wide frequency range of 15 to 400 Hz is needed for advanced $\tan \delta$ tests, which give the user important information about the transformer aging.

Power transformer testing

- > **DC winding resistance**
up to 100 A DC
- > **Dynamic load tap changer diagnostics (on load tap changer test)**
up to 100 A DC | optionally with CP SB1
- > **Transformer turns ratio (TTR) per tap**
up to 2 kV AC | including polarity and excitation current
- > **Leakage reactance / short circuit impedance**
up to 6 A AC
- > **Bushing: power / dissipation factor (tan δ) + insulation capacitance**
up to 12 kV, 300 mA | frequency from 15 to 400 Hz | with CP TD1
- > **Transformer: power / dissipation factor (tan δ) + insulation capacitance**
up to 12 kV, 300 mA | frequency from 15 to 400 Hz | with CP TD1
- > **Insulating fluids: power / dissipation factor (tan δ)**
up to 12 kV, 300 mA | with CP TD1 and CP TC12
- > **Excitation current per tap**
up to 12 kV, 300 mA | with CP TD1
- > **Frequency response of stray losses (FRSL)**
- > **Surge arrestors: leakage current and watt losses**
up to 12 kV, 300 mA | with CP TD1

10 reasons to choose a CPC 100

3. Testing and Reporting

- > Offline test preparation possibilities (time-saving and less error-prone)
- > CPC 100 software, automatically guiding the user through the test
- > Automated report generation
- > Customizable test reports (for example different languages, customer logo)

CP TD1 (tan δ)

12 kV

Insulation condition assessment of transformers, bushings and insulation fluids (with the CP TC12).

CP SB1 (Switch box)

3Ø, N

The CP SB1 switch box is the connection between transformer and CPC 100. Connecting all phases simultaneously avoids wiring errors and the need to repeatedly climb the transformer. Automatic OLTC control speeds up testing.

HV Cable and Power Line Testing

For a reliable power supply, selective operation of protection relays is crucial. Over- and under-reach can be avoided by having correct relay settings, and line data. Therefore it is necessary to determine line parameters, such as positive sequence impedance, zero sequence impedance or k-factors.

Calculating impedances and the k-factor is highly error-prone. Measuring line and ground impedance eliminates these errors and contributes to system reliability by providing proper relay settings.

Line parameter measurement

With the CPC 100 and the CP CU1 the impedance of cables and power lines can be measured accurately, quickly (in approximately two hours) and safely.

Line impedance and k-factor

The CPC 100 and the CP CU1 are used to inject current into the different phase-phase and phase-ground loops of a power line / cable, grounded at the other end, while measuring voltage, current and phase angle. From the measurement data of the different loops, line parameters are calculated. Variable frequency injection allows measurements to be made despite coupling from live parts or neighboring lines.

Mutual coupling

With this unique testing equipment, the mutual coupling factor of parallel lines can also be determined, allowing the correct parameterization of the mutual coupling algorithm of modern line protection relays.

CP CU1

Using variable output frequency, measurements with the CPC 100 are not influenced by mains frequency coupling. Precise and reproducible measurement results, even in noisy environments, are possible.

Cable and transmission line diagnosis

- > **Line impedance and k-factor**
up to 100 A | with CP CU1
- > **Mutual coupling**
up to 100 A | with CP CU1
- > **Positive or zero sequence impedance**

10 reasons to choose a CPC 100

4. Weight and Size

- > Light-weight (29 kg / 64 lbs)
- > Compact design
- > Save costs on:
 - > Transport
 - > Handling
 - > Storage

- 7.
- 8.
- 9.
- 10.

The CP CU1 allows the safe connection of the CPC 100 to a power line or HV cable. The impedance matching transformer within the CP CU1 ensures optimum power transfer from the CPC 100 to the power line.

The CP GB1 grounding box contains surge arrestors to ensure safe testing during unexpected events.

Substation Grounding Analysis

The grounding of a high-voltage electrical system helps to ensure the safety of personnel. Voltage rises in the neighboring area of electrical systems, caused by a system fault or lightning, can be extremely dangerous.

Conventional test solutions, which use power system frequencies, need enormous power and complicated methods to overcome the problems of interference. Varying the frequency and using narrowband digital filtering with the CPC 100 and CP CU1 reduces the required power and the equipment weight to a minimum.

Ground grid impedance

Using the current-voltage method, the challenge for good ground impedance (Z_{grid}) measurements is to inject sufficient measurement current into the soil at a remote location and to measure the voltage rise caused by this injection - and not by any other current in the ground.

The CPC 100 and CP CU1 test system meets this challenge. It injects current at non-network frequencies into the soil at a remote station via the existing power lines. It then selectively measures the voltage rise at the used frequencies.

The measurements are performed according to international standards including DIN VDE 0101, CENELEC HD637S1, IEEE Std 80-2000 and IEEE Std 81-1983.

Touch and step voltages

The touch and step voltages (V_{touch} and V_{step}) of the local station can be measured with the CPC 100 itself or more conveniently with the CP AL1 – a handheld selective voltmeter which minimizes wiring.

CP CU1

Using variable output frequency, measurements with the CPC 100 are not influenced by mains frequency coupling. Precise and reproducible measurement results, even in noisy environments, are possible.

Ground system analysis

- > **Ground grid impedance for large systems**
up to 100 A | with CP CU1
- > **Step and touch voltage**
up to 100 A | with CP CU1 and CP AL1
- > **Ground grid impedance for small systems**
up to 6 A AC
- > **Soil resistivity**
up to 6 A AC
- > **Integrity check of grounding connection**
up to 400 A DC
- > **Reduction factor / current split factor**
- > **Measure multiple current paths with Rogowski coil**

Rotating Machines Diagnosis

The most sensitive part in rotating machines is the insulation. The expected lifetime of a stator winding depends on the ability of the insulation to prevent winding faults.

High temperatures and high rates of temperature changes can generate micro-voids particularly at the interface between mica and resin, and between semiconductive layers and resin. Partial discharges in these voids will further increase the void size by erosion and complete breakdowns are inevitable.

Therefore, experts strongly recommend the checking of insulation for partial discharges during the whole lifecycle of motors and generators. In order to check the insulation a compensated high-voltage source is needed. The CPC 100, CP TD1 and CP CR500 test system can be utilized as a high-voltage source.

“ $\Delta \tan \delta$ ” test and tip-up test

As maintenance tools for entire windings, the “ $\Delta \tan \delta$ ” test and the tip-up test are used. Both tests are an indirect way of determining if partial discharges (PD) are occurring in a high-voltage stator winding.

An increase of the power factor / dissipation factor (tip-up) from the normal level indicates that the winding has significant PD activity, as this is indicative of this condition.

The CPC 100, CP TD1 and CP CR500 test system allow “ $\Delta \tan \delta$ ” and tip-up tests complying with the IEC 60894 and IEEE 286 specifications.

An acceptable power / dissipation factor offers assurance that the coil or the bar were properly fabricated with inherently low-loss materials.

0 to 2 kV

Rotating machines diagnosis

> **Power / dissipation factor ($\tan \delta$) tip-up test at 50 / 60 Hz**

up to 12 kV | max. 1 μ F / 4 A | with CP TD1 and CP CR500

> **Power / dissipation factor test with variable frequency**

up to 12 kV | frequency from 15 to 400 Hz | with CP TD1

> **HV source for testing rotating machines**

up to 12 kV | max. 2 μ F | with CP TD1 and CP CR500

Gas Insulated Switchgear Testing

Gas Insulated Switchgear (GIS) are compact and are, therefore, used in applications where space is limited. For commissioning of GIS a HV withstand test is required according to the standards (IEC 62271-203).

The test voltage needed for a withstand test has traditionally been produced by a resonance circuit. This test system consists of a HV test transformer and a coupling capacitor, which have to be connected to the GIS, as well as a resonant coil and a power control unit. This test system is often difficult to transport and requires a certain amount of space on site, which can be problematic at small locations such as wind turbines.

Additionally conventional external HV tests normally include a time-consuming venting and refilling process. The SF₆ gas has to be drained and refilled when connecting, testing and disconnecting the HV test lead to the GIS system.

A new approach to GIS testing

For this application a specially designed VT, called "Power VT", is needed within the GIS to handle the required power. It is used to generate HV on the HV side, by injecting power into the LV side using the CPC 100.

In order to inject enough power into the secondary side of the VT, the transferred impedance needs to be compensated.

As the GIS is a capacitive load, the majority of the power on the LV side can be delivered using compensation reactors (CP CR). The remaining power is delivered by the CPC 100 at frequencies from 90 to 120 Hz.

Thus the HV withstand test can be performed without the need of a big HV transformer. The CPC 100, CP TR8 and CP CR are small and can be transported by one person. This makes HV withstand testing possible even at locations with limited space for measurement equipment.

(Isolation

The CPC 100's variable frequency and high power (5 kVA) capabilities are ideal for this application.

GIS testing

> Withstand test

up to 200 kV | max 1.5 nF | with CP TR8 and CP CR

- 10.

Switchgear and Circuit Breaker Testing

Switchgear consists of busbars, circuit breakers (CB), disconnectors and earthing switches. There are various connections and contacts within the switchgear. Poorly maintained or damaged contacts can cause arcing, single phasing or even fire which can lead to the total loss of the asset.

Therefore, it is common practice to conduct contact resistance measurements to ensure that the connections have been made with the appropriate contact pressure.

Additionally, the insulation of CBs within the switchgear has to be tested. These assets are frequently exposed to HV stresses, switching currents and very high fault currents, which heat up the circuit breakers and impact on the insulation material.

Contact resistance measurement

The CPC 100 can measure contact resistance by injecting a current of up to 400 A DC into the contacts and measuring the voltage drop (using the 4-wire method). The resistance value can be compared to the value given by the manufacturer as well as to previous records.

Insulation testing of circuit breakers

For power / dissipation factor ($\tan \delta$) measurements of circuit breakers, the CPC 100 is combined with the CP TD1. Measuring this factor over a wide frequency range – in addition to mains frequency – helps to better assess the insulation condition.

Timing of CBs with overcurrent elements

For testing of CBs or load breaker switches with integrated overcurrent elements, the CPC 100 can inject AC primary currents up to 800 A (or 2000 A together with the current booster CP CB2), and measure the time from the start of the injection to the interruption of the current.

0 to 2 kV

400 A DC

$\mu\Omega$ measurement with the CPC 100's 400 A DC capabilities enables accurate contact resistance measurements on circuit breakers.

Switchgear / circuit breaker testing

CP TD1 ($\tan \delta$)

12 kV

Insulation condition assessment of circuit breakers and insulation fluids (with CP TC12).

Commissioning and Trouble Shooting of Protection

In order to work properly, protection and control systems have to be correctly integrated into the substation or power plant. Quantities from the primary system are transformed at the VTs and CTs – using their different cores – and so the voltage and current signals must be correctly connected to the protection relays, automation units and meters.

From these protection and control units, the trip signals are routed back to the primary apparatus, for example, the circuit breakers. A fault in any part of this system may result in a system failure – false tripping or a failure to trip.

To prevent such a failure, the system's functionality can be verified by injecting into the primary side of the CT or VT and checking the measured values at the relay or automation unit. Finally, injecting current at the magnitude of a fault should result in the tripping of the circuit breaker, which allows the verification of the complete chain.

Commissioning protection systems

The CPC 100 allows the verification of the ratio and polarity of CTs and VTs – preventing wrong connections, especially in the case of tapped CTs. Injecting current or voltage into individual CTs / VTs and checking the reading at the relay ensures that phases are not mixed up and that the CT and VT ratio setting in the relay is correct.

The CPC 100 can also measure the burden on the CTs and VTs and, by determining the CT's excitation curve, it ensures that the protection circuits are connected to the appropriate CT cores.

The CPC 100 can help to verify that the secondary wiring is correct. By injecting a sawtooth signal into the CT or VT, the operator verifies with a handheld device that the signal has the correct polarity at the connection points of the secondary systems.

With the CPC 100 primary faults can be simulated to check if overcurrent, differential or distance relays operate correctly. The total trip time including the CB operating time can also be measured in this test.

The CPC 100 can inject up to 800 A (2000 A with the CP CB2) or up to 2 kV as well as a sawtooth polarity check signal into CTs or VTs in the HV yard, hence performing testing on the whole system.

Protection installation testing

- > **CT ratio (with burden)**
up to 800 A or 2000 A with the CP CB2, 5 kVA output power
- > **CT burden**
up to 6 A AC | secondary
- > **CT excitation curve (knee point)**
up to 2 kV AC
- > **VT ratio**
up to 2 kV AC | polarity and burden

IEC 61850-9-2 Sampled Values Testing

The standard for “Communication Networks and Systems for Power Utility Automation”, IEC 61850, utilizes network technologies for all types of information exchange.

Within IEC 61850, protocols for the transmission of instantaneous voltage and current values are specified. The sensors used in the transmission process can be conventional CTs and VTs as well as unconventional current and voltage sensors.

Sampled Values

A merging unit (MU) collects the measured current and voltage values from the current and voltage sensors. Then it merges the digitized values, which are called “Sampled Values” (SV), into a data stream published to the substation network.

Using this method, measured values (for example, the bus voltage for a busbar protection scheme) can easily be distributed to multiple bay devices.

Sampled Values testing with the CPC 100

The CPC 100 test system performs closed-loop testing whereby a test signal is injected on the primary side of the current / voltage sensors. The MU converts the sensor output into a SV stream which is published to the substation network. The CPC 100 then reads the data back from the network in order to perform a variety of different tests.

Automatic MU and channel detection is achieved by injecting a test signal with a specific wave form. An optimized and time-effective algorithm searches for the unique test pattern within all the available MUs on the network to identify the correct channel for testing.

The CPC 100’s SV test card operates according to the “Implementation Guideline for Digital Interface to Instrumental Transformers using IEC 61850-9-2” published by the UCA International User Group.

Sampled Values testing

- > **SV CT ratio test and polarity check**
up to 800 A or up to 2000 A, 5 kVA output power | with the CP CB2
- > **SV VT ratio test and polarity check**
up to 2 kV AC
- > **Automatic MU detection**

- > **Amplitude response of the signal processing chain**
up to 800 A or up to 2 kV AC | frequency from 15 to 400 Hz

10 reasons to choose a CPC 100

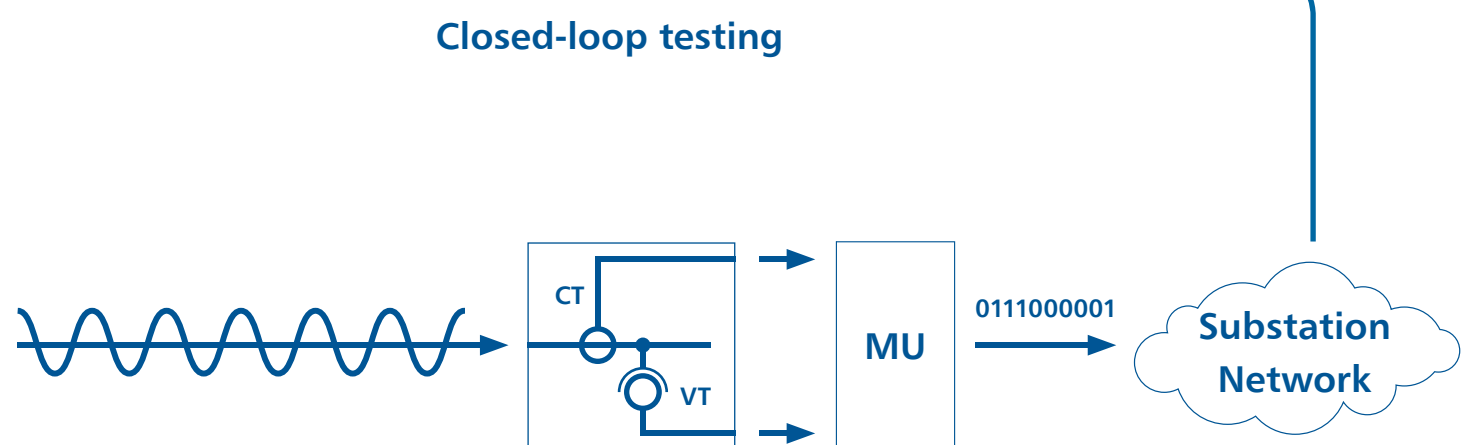

10. Prepared for the future

- > Unconventional assets can be tested (for example Rogowski coils, low power CTs)
- > Testing according to IEC 61850-9-2 (for example Sample Values testing, Merging Unit testing)
- > Future applications areas will be covered by new developed accessories and software

Closed-loop testing

0111000001

The CPC 100 injects a sinusoidal test signal to perform tests such as the ratio test. Additionally, the CPC 100 generates specific periodic wave shapes to identify the correct MU and corresponding test channel.

CTs, VTs and unconventional sensors

Operation of CPC 100: Front Panel

Different ways to operate

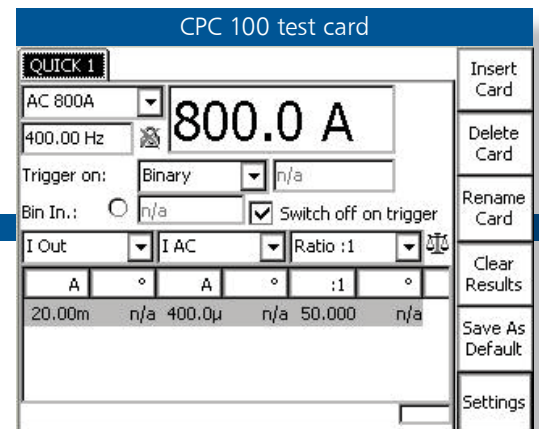

OMICRON's CPC 100 offers different operating modes, to meet the personal preferences of the user:

- > From the front panel: Selecting test cards directly
- > From the front panel: Using pre-defined test templates
- > Fully automated: Using Primary Test Manager (see next double page)

Operating from the front panel

1. Selecting test cards directly

Operating the CPC 100 manually provides the quickest results with minimal training and preparation – perfect for users who only operate the device occasionally. The user just selects the test card to be used, connects the CPC 100 to the asset and performs the test by pressing the green button.

2. Using pre-defined test templates

Additionally, pre-defined test templates help the user to perform frequently used tests conveniently and efficiently. A number of test cards (for example, power / dissipation factor, winding resistance, ratio measurement, etc.) are combined into one test template. An example is the template containing all the recommended measurements for testing a current transformer.

The test template can be seen as a test plan. It tells the user which measurements to make and provides the basis for the overall test report.

Test templates can be prepared in advance in the office on the PC – without the CPC 100 connected – and can then be executed on site, step by step. Users can also create their own test templates and define, which test cards they want to include.

The settings and results of all manual tests can be stored on a flash memory and transferred to a PC using a USB memory stick or ethernet connection.

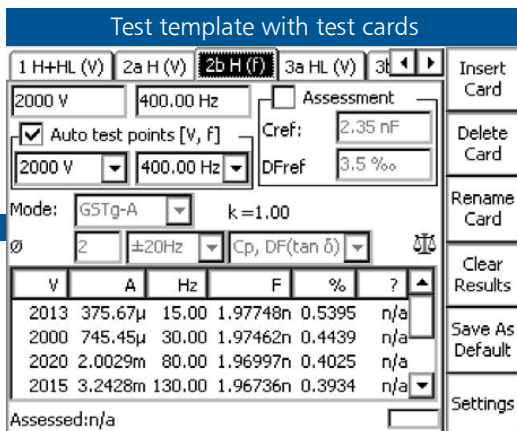

Customized Reporting: Microsoft Excel

After transferring the test results to a PC, report templates in numerical and graphical form are available.

The measurement data – including settings and results as well as administrative information such as date and time, filename, etc. – can also be imported to these templates for customized reporting, graphical result evaluation and further analyses.

Microsoft Excel reports provide the basis for client-specific reporting and allow test reports to be adapted to utility or manufacturer specific formats. Further content, such as company logos, can also be added.

Test reports can then be printed in a variety of languages.

Operation of CPC 100: Primary Test Manager

Primary Test Manager (PTM)

OMICRON's PTM software supports the user's workflow during diagnostic testing. The user can define and manage test objects, create test plans, perform measurements, and generate reports.

PTM manages the entire workflow during testing, guiding the user through the process step-by-step. Its main functions include:

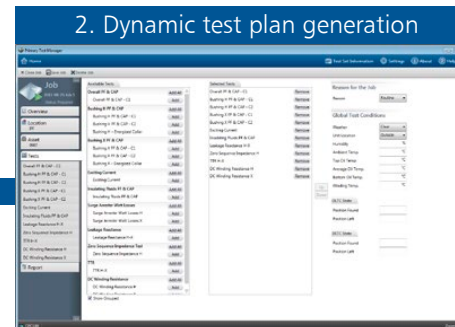

1. Data management
2. Dynamic test plan generation
3. Guidance through test procedures
4. Comprehensive reporting

1. Data management

PTM facilitates the administration of the data of the asset to be tested. Its general data including the location, manufacturer, production date and serial number can be entered in addition to the electrical data which forms the basis for the dynamic generation of test procedures.

2. Dynamic test plan generation

Using the electrical data of the apparatus, PTM generates a plan of diagnostic measurements to be performed in accordance with industry standards, saving time and reducing the risk of errors.

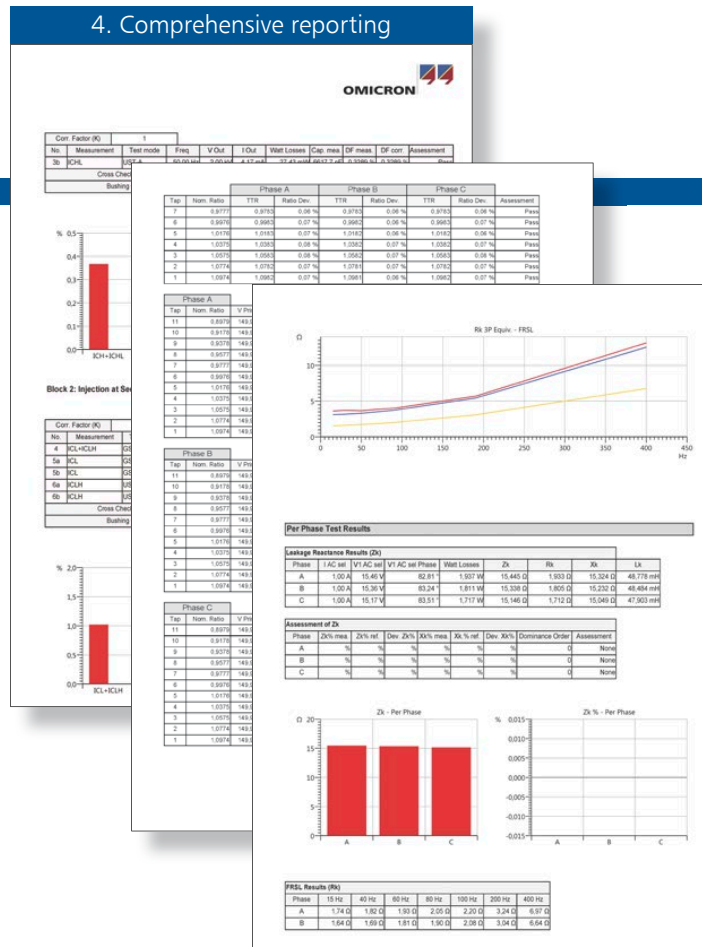

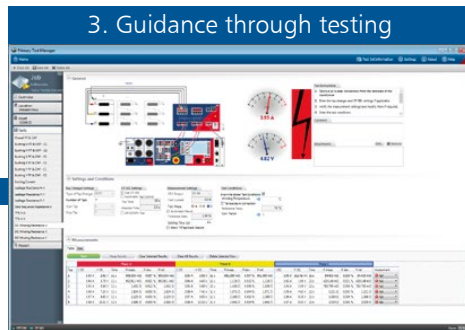

3. Guidance through the testing procedure

During the measurement, the PTM allows the direct control of the test instrument from a PC or laptop. Clear connection schemes help to avoid errors when making the connections. At a glance, the user gets an overview of the progress of the test and the tasks remaining by following the execution of the steps in the test table.

4. Comprehensive reporting

After the tests are completed, reports of any of the measurements made can be generated at any time. The content of the report is flexible – as components can be easily selected and de-selected by mouse-clicks. In addition a company logo, pictures and other tests results can be added.

Front Panel and Connection Possibilities

- 1 Grounding terminal
- 2 High AC voltage output 2 kV AC
- 3 External booster output
- 4 High DC current output 400 A DC
- 5 High AC current output 800 A AC
- 6 Mains power supply
- 7 Overcurrent protection
- 8 Power switch

- 9 6 A or 130 V output
- 10 Current output 6 A DC
- 11 Current measuring input 10 A AC or DC
- 12 Voltage measuring input 300 V AC
- 13 Low level voltage measuring input 3 V AC
- 14 Voltage measuring input 10 V DC
- 15 Binary input for potential-free contacts or voltages up to 300 V DC
- 16 Safety key lock
- 17 Signal lights
- 18 Emergency stop button

- 19 Keys for the quick selection of applications
- 20 Keys for the quick selection of the desired view
- 21 LCD monitor
- 22 Soft-touch keys which change their function according to the selected application
- 23 Keys for selecting stacked test cards
- 24 Numerical keyboard
- 25 Advanced jog-dial hand wheel with "click" (Enter) function
- 26 Up / down keys for navigation and entering values
- 27 Test start / stop button
- 28 User manual

- 29 Serial interface for devices such as CP TD1
- 30 Plug to connect external safety functions
- 31 Socket for the connection of the CPC 100 to a network or direct connection to a PC's network connector
- 32 USB memory stick connection

CPC 100 - Operating Principle

Internal elements of the CPC 100

These key components make the CPC 100 outstanding:

- > Control unit
- > Power electronics unit
- > Multiple range transformer
- > Measurement unit
- > Interface

Each of the above is engineered to operate effectively in harsh electrical and environmental conditions associated with the testing of HV apparatus.

Control unit

The “brain” of the CPC 100 consists of two signal processing units and an embedded computer providing:

- > Application knowledge for all of the incorporated testing procedures
 - > Up-to-date, practical and efficient measurement functions
- > Digital test voltage or current generation
 - > Enables independence from the mains signal quality
 - > Enables independence from the mains frequency
 - > Assures a high level of reproducibility of measurements
- > Safety functions such as ground connection checks, self diagnostics, overload, overcurrent and overtemperature management
 - > Reduces the risks to the user and the test objects
 - > Prevents damage to the CPC 100 and its accessories
- > Data storage using onboard flash memory and external USB memory
 - > Saves time through its automatic storage and reporting functions

Power electronic unit

Adjustable and controlled voltage or current source with variable frequency

- > Supplied from a single phase wall outlet (110 / 230 V, 50 / 60 Hz)
 - > The CPC 100 can be used everywhere in the substation or power plant
- > DC intermediate circuit allows reactive power to be generated inside the unit
 - > As only active power is taken from the supply socket, less current has to be taken from the wall socket
 - > Longer injection times are possible
- > Generation of voltage or current with variable frequency
 - > Avoids mains frequency related noise
 - > Performs accurate measurements in noisy environments
 - > Tests apparatus with different frequency rating (for example, for factory tests in the supplier’s home country)
- > Generates different periodic wave shapes (sine wave, sawtooth, etc.)
 - > Performs special measurements (polarity verification, IEC 61850 merging unit and channel detection)

Multi-range transformer

- > Special multi-range 5 kVA transformer facilitates different test signal ranges
- > Multiple isolated and protected outputs for safe operation
 - > Avoids unwanted ground loops and makes measurements accurate and safe
- > Automatic measurement of test signals, which are difficult or dangerous to measure (for example, 2 kV high-voltage or 800 A high-current output) using internal measurement and regulation loops
 - > Delivers a constant output under variable test impedance conditions

Measurement unit

- > RMS and phase-angle measurements:
 - > Measures voltage, current, ratio, frequency, phase
 - > Verifies polarity (for example, on CTs and VTs)
 - > Calculates power (P, Q, S) and impedance (R, L, C, Z, X)
- > Frequency selective measurements (measuring signals at the same frequency as the CPC 100 source signals)
 - > Suppresses all disturbances, including mains frequency related noise
 - > Measures small signals in electromagnetically disturbed environments
- > Inputs are galvanically separated from each other
 - > Avoids the wrong measurement results due to unintended ground loops
- > All inputs are equipped with overvoltage and surges protection devices
 - > Avoids damage to the CPC 100
- > Connection of external sensors (CTs, VTs and current clamps) is supported by the CPC 100 software
- > Advanced measurement capabilities (for example, integral of a signal for measuring Rogowski coil CTs)

Interface

- > Easy and intuitive graphical user interface
 - > Efficient, time-saving testing
- > Different selectable language settings and test standards (for example, IEEE, IEC, etc.)
 - > Users from different countries can effectively use the device
 - > Reports can be generated in different languages
- > Wiring connections to be made are indicated by LEDs
 - > Quick wiring set-up
 - > Avoids wiring errors
- > Different operation modes: From the front panel with test cards or controlled by a PC
 - > Each user can operate the CPC 100 according to personal preferences

Technical Data CPC 100

CPC 100

Generator / Outputs

Current outputs

Range	Amplitude	t_{\max}^1	V_{\max}^2	Power $_{\max}^2$	f
800 A AC ³	0 to 800 A	25 s	6.0 V	4800 VA	15 to 400 Hz
	0 to 400 A	8 min.	6.4 V	2560 VA	15 to 400 Hz
	0 to 200 A	> 2 h	6.5 V	1300 VA	15 to 400 Hz
6 A AC ¹⁰	0 to 6 A	> 2 h	55 V	330 VA	15 to 400 Hz
3 A AC ¹⁰	0 to 3 A	> 2 h	110 V	330 VA	15 to 400 Hz
400 A DC	0 to 400 A	2 min.	6.5 V	2600 VA	DC
	0 to 300 A	3 min.	6.5 V	1950 VA	DC
	0 to 200 A	> 2 h	6.5 V	1300 VA	DC
6 A DC ^{4,10}	0 ... 6 A	> 2 h	60 V	360 VA	DC

2000 A AC³ with an optional current booster (CP CB2)

Voltage outputs

Range	Amplitude ⁵	t_{\max}	I_{\max}	Power $_{\max}^5$	f
2 kV AC ³	0 to 2 kV	1 min.	1.25 A	2500 VA	15 to 400 Hz
	0 to 2 kV	> 2 h	0.5 A	1000 VA	15 to 400 Hz
1 kV AC ³	0 to 1 kV	1 min.	2.5 A	2500 VA	15 to 400 Hz
	0 to 1 kV	> 2 h	1.0 A	1000 VA	15 to 400 Hz
500 V AC ³	0 to 500 V	1 min.	5.0 A	2500 VA	15 to 400 Hz
	0 to 500 V	> 2 h	2.0 A	1000 VA	15 to 400 Hz
130 V AC ¹⁰	0 to 130 V	> 2 h	3.0 A	390 VA	15 to 400 Hz

Internal measurement of outputs (Accuracy⁶)

Output	Range	Reading	Amplitude		Phase
			Full scale	Full scale	
800 A AC	-	Error < 0.10 %	Error < 0.10 %	Error < 0.10 °	
400 A DC	-	Error < 0.20 %	Error < 0.05 %	-	
2 kV AC	2000 V	Error < 0.05 %	Error < 0.05 %	Error < 0.10 °	
	1000 V	Error < 0.05 %	Error < 0.05 %	Error < 0.15 °	
	500 V	Error < 0.05 %	Error < 0.05 %	Error < 0.20 °	
	5 A	Error < 0.20 %	Error < 0.05 %	Error < 0.10 °	
	500 mA	Error < 0.05 %	Error < 0.05 %	Error < 0.10 °	

Inputs

Measuring inputs (Accuracy⁶)

Input	Imped.	Range	Reading	Amplitude		Phase
				Full scale	Full scale	
I AC/DC ^{4,7}	< 0.1 Ω	10 A AC	Error < 0.05 %	Error < 0.05 %	Error < 0.10 °	
		1 A AC	Error < 0.05 %	Error < 0.05 %	Error < 0.15 °	
		10 A DC	Error < 0.03 %	Error < 0.08 %	-	
		1 A DC	Error < 0.03 %	Error < 0.08 %	-	
V1 AC ⁸	500 kΩ	300 V	Error < 0.05 %	Error < 0.05 %	Error < 0.10 °	
		30 V	Error < 0.05 %	Error < 0.05 %	Error < 0.10 °	
		3 V	Error < 0.10 %	Error < 0.05 %	Error < 0.10 °	
		300 mV	Error < 0.15 %	Error < 0.05 %	Error < 0.10 °	
V2 AC ^{8,11}	10 MΩ	3 V	Error < 0.03 %	Error < 0.08 %	Error < 0.10 °	
		300 mV	Error < 0.08 %	Error < 0.08 %	Error < 0.10 °	
		30 mV	Error < 0.10 %	Error < 0.25 %	Error < 0.15 °	
		V DC ^{4,7}	10 V	Error < 0.03 %	Error < 0.08 %	-
		1 V	Error < 0.03 %	Error < 0.08 %	-	
		100 mV	Error < 0.05 %	Error < 0.10 %	-	
		10 mV	Error < 0.05 %	Error < 0.15 %	-	

Additional features of the measuring inputs

Automatic range switching (except Amplifier test card)
Galvanically separated potential groups: I AC/DC ; V1 & V2 ; V DC
AC frequency range: 15 to 400 Hz (except Amplifier test card)
Protection of I AC/DC input: 10 A very fast acting (VF) fuse⁴

Binary input for dry contacts or voltages up to 300V DC⁷

Trigger criteria: Toggling with potential-free contacts or voltages of up to 300 V
Input impedance: > 100 kΩ
Response time: 1 ms

Resistance Measurement

4-wire measurement with 400 A DC output and 10 V DC input

Current	Resistance	Voltage	Accuracy (full scale)
400 A	10 μΩ	4 mV	Error < 0.70 %
400 A	100 μΩ	40 mV	Error < 0.55 %
400 A	1 mΩ	400 mV	Error < 0.50 %
400 A	10 mΩ	4 V	Error < 0.50 %

4-wire measurement with 6 A DC output and 10 V VDC input

Current	Resistance	Voltage	Accuracy (full scale)
6 A	100 mΩ	0.6 V	Error < 0.35 %
6 A	1 Ω	6 V	Error < 0.35 %
1 A	10 Ω	10 V	Error < 0.25 %

2-wire measurement with 10 V VDC input

Current	Resistance	Voltage	Accuracy (full scale)
< 5 mA	100 Ω		Error < 0.60 %
< 5 mA	1 kΩ		Error < 0.51 %
< 5 mA	10 kΩ		Error < 0.50 %

Output to input synchronization

	Test cards Quick, Sequencer, Ramping	Amplifier test card
Frequency range	48 - 62 Hz	
Synchronization inputs	V1 AC (automatic range switch)	V1 AC, V2 AC, I AC (fixed to maximum range)
Input magnitude	10 % of input range full scale	
Output magnitude	5 % of output range full scale	
Settling time	100 ms after 5 % of output range full scale is reached	1000 ms after 5 % of output range full scale is reached
Signal changes	All quantities must be ramped within 20 signal periods	No changes of frequency and phase. Magnitude changes without limitation. Output follows within 250 ms
Phase tolerance	0.5 ° within the limits as specified above	

Power supply and mechanical data

Single-phase, nominal ⁹	100 V AC to 240 V AC, 16 A
Single-phase, permissible	85 V AC to 264 V AC (L-N or L-L)
Frequency, nominal	50 / 60 Hz
Power consumption	< 3500 VA (< 7000 VA for a time < 10 s)
Connection	IEC320 / C20
Dimensions (W x H x D)	468 x 394 x 233 mm (18.4 x 15.5 x 9.2 in), cover, without handles.
Weight	29 kg / 64 lbs (case without protection cover)
EMC	EN 50081-2, EN 55011, EN 61000-3-2, FCC Subpart B of Part 15 Class A, EN 50082-2, IEC 61000-4-2/3/4/8, CE conform (89/336/EEC)
Safety	EN 61010-1, EN 60950, IEC 61010-1, produced and tested in an EN ISO 9001 certified company
Prepared for	IEEE 510, EN 50191, VDE 104
Shock	IEC68-2-27 (operating), 15 g / 11 ms, half-sinusoid
Vibration	IEC68-2-6 (operating), 10 to 150 Hz, acceleration 2 g continuous (20 m/s ²); 10 cycles per axis

Environmental conditions for CPC 100 and CPC 100 accessories

Operating temperature	-10 °C to +55 °C / +14 °F to +131 °F
Storage temperature	-20 °C to +70 °C / -4 °F to +158 °F
Humidity range	5 to 95 % relative humidity, no condensation

All input / output values are guaranteed for one year within an ambient temperature of 23 °C ± 5 °C / 73 °F ± 10 °F, a warm-up time longer than 25 min. and in a frequency range of 45 to 60 Hz or DC. Accuracy values indicate that the error is smaller than ± (value read x reading error + full scale of the range x full scale error).

1. With a mains voltage of 230 V using a 2 x 6 m high-current cable at an ambient temperature of 23 °C ± 5 °C / 73 °F ± 10 °F.
2. The power and maximum voltage may be reduced above 60 Hz or below 50 Hz.
3. Output can be synchronized with V1 AC in Quick, Sequencer, Ramping and Amplifier test cards.
4. The inputs and outputs are protected with lightning arrestors between the connector and against the protective earth. In the event of application of energy exceeding a few hundred Joule the lightning arrestors apply a permanent short-circuit to the input / output.
5. The power and amplitude may be reduced above 200 Hz or below 50 Hz.
6. 98 % of all units have an accuracy better than specified as "typical".
7. This input is galvanically separated from all other inputs.
8. V1 and V2 are galvanically coupled but separated from all other inputs.
9. There are power restrictions for mains voltages below 190 V AC.
10. Fuse-protected.
11. When using the CT Rogowski test card, the 3 V V2 AC input uses an additional software based integration method. In the range of 50 Hz < f < 60 Hz, this results in a phase shift of 90 ° as well as an additional phase error of ± 0.1 ° and an additional amplitude error of ± 0.01 %. For frequencies in the range of 15 Hz < f < 400 Hz, the phase error is not specified, and the amplitude error can be up to ± 0.50 % higher.

Technical Data CPC 100 Accessories

CP TD1 – Tan-Delta

High-voltage output

U/f	I	S	t _{max}	f
0 to 12 kV AC	300 mA	3600 VA	> 2 min.	15 to 400 Hz
0 to 12 kV AC	100 mA	1200 VA	> 60 min.	15 to 400 Hz

Internal measurement of voltage output / current inputs

Range	Resolution	Accuracy	Conditions
0 to 12000 V AC	1 V	Error < 0.3 % of reading + 1 V	
0 to 5 A AC	5 digits	Error < 0.3 % of reading + 100 nA	I _x < 8 mA
	5 digits	Error < 0.5 % of reading	I _x > 8 mA

Capacitance Cp (equivalent parallel circuit)

Range	Resolution	Accuracy	Conditions
1 pF to 3 μF	6 digits	Error < 0.05 % of reading + 0.1 pF	I _x < 8 mA, V _{test} = 300 V to 10 kV
		Error < 0.2 % of reading	I _x > 8 mA, V _{test} = 300 V to 10 kV

Power factor PF / Dissipation factor DF

Range	Resolution	Accuracy	Conditions
0 to 10 % (capacitive)	5 digits	Error < 0.1 % of reading + 0.005 %	f = 45 to 70 Hz I < 8 mA V _{test} = 300 V to 10 kV
0 to 100 (0 to 10000 %)	5 digits	Error < 0.5 % of reading + 0.02 %	V _{test} = 300 V to 10 kV

Impedance

Range	Resolution	Accuracy	Conditions
1 kΩ to 1,200 MΩ	6 digits	Error < 0.5 % of reading	V _{test} = 300 V to 10 kV

Phase angle

Range	Resolution	Accuracy	Conditions
-90 ° to +90 °	4 digits	Error < 0.01 °	V _{test} = 300 V to 10 kV

Quality factor

Range	Resolution	Accuracy
0 to 1000	5 digits	Error < 0.5 % of reading + 0.2 %
> 1000	5 digits	Error < 5 % of reading

Inductance

Range	Resolution	Accuracy
1 H to 1000 kH	6 digits	Error < 0.3 % of reading

Watts / Power (P, Q, S)

Range	Resolution	Accuracy
0 to 3.6 kW / kVA / kvar	5 digits	0.5 % reading + 1 mW / mVA / mvar

Mechanical data

Dimensions (W x H x D)	450 x 330 x 220 mm / 17.7 x 13 x 8.7 in
Weight	26 kg / 57.32 lbs

CP CU1 – Coupling unit

Output ranges

Range	Current	Compliance voltage at > 45 Hz
10 A	0 to 10 Arms	500 Vrms
20 A	0 to 20 Arms	250 Vrms
50 A	0 to 50 Arms	100 Vrms
100 A	0 to 100 Arms	50 Vrms

Measuring transformers

Transformer	Ratio	Accuracy at 50 / 60 Hz
VT	600 V : 30 V	Class 0.1
CT	100 A : 2.5 A	Class 0.1

Inputs

	Characteristic	Rating
V SENSE	Overvoltage category	CAT III (IEC 61010-1)
	Voltage range	0 to 600 Vrms
BOOSTER	Overvoltage category	CAT I
	Voltage range	0 to 200 Vrms
	Current range	0 to 30 Arms
	Frequency range	15 to 400 Hz
Fuse		30 A fast acting, automatic circuit breaker

Output power

Characteristic	Rating
Maximum power	5000 VA (45 to 70 Hz), cosφ < 1.0 for 8 s at 230 V AC
	5000 VA (45 to 70 Hz), cosφ < 0.4 for 8 s at 115 V AC
Continuous power	0 to 1600 VA

Accuracy

Range	Accuracy of absolute value	Accuracy of phase angle	V SENSE voltage	I OUT current	Current range
0.05 to 0.2 Ω	1.0 to 0.5 %	1.5 to 0.8 °	5 to 20 V	100 A	100 A
0.2 to 2 Ω	0.5 to 0.3 %	0.8 to 0.5 °	20 to 50 V	100 to 25 A	100 A
2 to 5 Ω	0.3 %	0.5 °	100 V	50 to 20 A	50 A
5 to 25 Ω	0.3 %	0.5 °	100 to 250 V	20 to 10 A	20 A
25 to 300 Ω	0.3 to 1.0 %	0.5 to 1.5 °	250 to 500 V	10 to 1.5 A	10 A

Mechanical data

Dimensions (W x H x D)	450 x 220 x 220 mm / 17.7 x 8.7 x 8.7 in
Weight	28.5 kg / 62.78 lbs

CP CB2 – Current booster

Output current	up to 2000 A
Output power at 2000 A	5 kVA
Accuracy of current at 50 / 60 Hz	Error < ± 0.13 % (rd) ± 0.13 % (fs)
Phase tolerance at full scale	Error < ± 0.25 %
Dimensions (W x H x D)	186 x 166 x 220 mm / 7.3 x 6.5 x 8.7 in
Weight	16.0 kg / 35.3 lbs

CP DB1 – Discharge box

6 A path	Switch closed	6 A continuous The discharge process is faster by a factor of 4 compared to the CPC 100
	Switch open	6 A _{peak} Overtemperature protection: 85 °C / 185 °F Overvoltage protection: 150 V / 5 kA between connectors
100 A path	Switch closed	100 A continuous The discharge process is faster by a factor of 10 compared to the CPC 100
	Switch open	100 A _{peak} 2500 J _{max} Overvoltage protection: 200 V / 30 kA between connectors
Dimensions (W x H x D)	357 x 235 x 147 mm / 14.0 x 9.2 x 5.8 in	
Weight	4 kg / 8.8 lbs	

CP SB1 – Switch box

AC input / V1 AC output	Max. 300 V _{rms}
DC input	Max. 6 A DC
Transformer high and low voltage connections	Max. 300 V _{eff} between all connectors and ground
Supply	Via serial interface from CPC 100 (+15 V)
Dimensions (W x H x D)	357 x 235 x 111 mm / 14.1 x 9.2 x 4.4 in
Weight	3.5 kg / 7.7 lbs

CP TC12 – 12 kV oil test cell

Cell type	Three-electrode design with guard
Test gap	11 mm / 0.43 in
Capacitance of empty cell (air)	Approx. 65 pF ± 10 %
Sample volume	1.2 to 2 liters / 41 to 68 fl.oz.
Max. RMS test voltage	12 kV
Inner dimensions (diameter x height)	172 mm x 180.8 mm / 6.8 x 7.1 in
Outer dimensions (W x H x D)	220 x 235.5 x 220 mm / 8.7 x 9.3 x 8.7 in
Weight	Approx. 9.2 kg / 20 lbs

CPOL - Polarity checker

Measuring range	Typical: 5 mV to 300 V Guaranteed: 50 mV to 300 V
Nominal frequency	Typical: 52.6 Hz Possible: 40 to 60 Hz
Minimum slope ratio	25 to 90 % or via pulse width
Power consumption	Key pressed: 25 mA Key not pressed: 0 mA
Input impedance	400 kΩ
Batteries	4 x 1.5 V Micro LR03 AAA AM4 MN2400
Dimensions (W x H x D)	200 x 45 x 35 mm / 78.7 x 17.7 x 13.8 in
Weight	0.25 kg / 0.11 lb including batteries and bag

CP CR500 – Compensation reactor

Inductors	2 x 40 H	2 x 80 H	1x 40 H and 1 x 80 H
Current compensation			
50 Hz	2 x 1 A	2 x 500 mA	1x 1 A + 1 x 500 mA
60 Hz	2 x 800 mA	2 x 400 mA	1 x 1 A + 1 x 400 mA
Capacitance compensation			
50 Hz	2 x 250 nF	2 x 125 nF	1 x 250 nF + 1 x 125 nF
60 Hz	2 x 175 nF	2 x 90 nF	1 x 175 nF + 1 x 90 nF
35 Hz	2 x 500 nF		
Maximum test voltage	12 kV rms (≥ 50 Hz)		
Dimensions (W x H x D)	457 x 222 x 225 mm / 18 x 8.7 x 8.9 in		
Weight	36.8 kg / 81.4 lbs		

CP AL1 – FFT Voltmeter with adapter

Connections	XLR Input and RCA Input
Power supply	3 x 1.5 V batteries (AA/LR6 alkaline type)
Dimensions (W x H x D)	86 x 205 x 42 mm / 3.35 x 8.07 x 1.57 in
Weight (including batteries)	0.45 kg / 0.98 lbs

CP GB1 – Grounding box

Nominal ac spark-over voltage	< 1000 V _{rms}
Impulse spark-over voltage	< 2000 V _{peak}
Short circuit proof with:	
16 mm cylindrical or 20 mm ball studs	26.5 kA (< 100 ms) / 67 kA _{peak}
25 mm or 1 in ball studs	30 kA (< 100 ms) / 75 kA _{peak}
Torsional moment for changing arrestors	> 15 Nm
Dimensions (Ø x H)	200 x 190 mm / 7.9 x 7.5 in
Weight	6.8 kg / 13.2 lbs (including grounding cable)

CP RC – Compensating reactor

	CP TR8	CP CR6	CP CR4
Voltage output	220 V	220 V	220 V
Current output	60 A	150 A	150 A
Apparent power on secondary side	13.2 kVAR	33 kVAR	33 kVAR
Frequency	90 to 120 Hz	90 to 120 Hz	90 to 120 Hz
Insulation class	F	F	
Dimensions (W x H x D)	262 x 277.5 x 222 mm / 10.31 x 10.9 x 8.74 in		
Weight	20.5 kg / 45 lbs		

Ordering Information

CPC 100 Standard Package (Order No. VE000611)

The package consists of the following items:

Hardware

CPC 100

Software

VESM0600	CP Quick Card
VESM0610	CP CT test cards
VESM0615	CP VT test cards
VESM0620	CP transformer test cards
VESM0625	CP resistance test cards
VESM0670	CPC editor software

Cables and accessories

VESD0601	CPC 100 User manual
VEHK0612 or VEHK0617	Standard high-current cable set (2 x 6 m / 19.68 ft) or optional high-current cable set (2 x 9 m / 29.53 ft)
VEHK0613 or VEHK0618	Standard high-voltage cable set (2000 V, 2 x 6 m / 19.68 ft) or optional high-voltage cable set (2000 V, 2 x 10 m / 32.81 ft)
VEHK0614 or VEHK0619	Standard measurement cable set (6 x 6 m / 19.68 ft) or optional measurement cable set (6 x 10 m / 32.81 ft)
VEHK0615	Grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm ²)
VEHK0622	Ethernet PC connection cable (3 m / 9.84 ft)
VEHP0061	Transport case with wheels for CPC 100
VEHP0069	Carry bag for CPC 100 accessories
VEHZ0610	Connection clamps for high voltage
VEHK0623	Low voltage adapter
VEHK0616,20,21,24	Power cord CPC
VEHZ0665	CP SA1 Surge Arrestor box
VEHZ0666	USB Memory Stick
VEHZ0620	Crocodile clamps
X0000089	CPC Tool Set DVD

CPC 100 Enhanced Package (Order No. VE000621)

CPC 100 Standard Package plus:

Software

VESM0635	CP sequencer test card
VESM0630	CP ramping test card
VESM0640	CP GR – ground resistance test option includes testing software and hardware accessory (VEHZ0660)
VESM0645	CPOL software and hardware accessory (VEHZ0650)

CP TD1 upgrade option (Order No. VE000641)

Hardware CP TD1

Cables and accessories

VEHZ0600	CP TD1 accessories
VEHZ0620	Crocodile clamps
VEHS0006	Solid terminal adapters (12 pcs)
VEHK0615	Grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm ²)
VEHP0067	Transport case with wheels for CP TD1 accessories
VEHZ0678	Hot collar band
VEHP0062	Transport case with wheels for CP TD1
VESD0606	CP TD1 Reference manual
VEHZ0640	CP Trolley
X0000089	CPC Tool Set DVD

CP CU1 and CP GB1 upgrade option (Order No. VEHZ0671)

Hardware CP CU1
CP GB1

Cables and accessories

VEHK0677	3-lead shorting cable (0.3 m / 11.81 in, 10 mm ²)
VESD0671	CP CU1 Reference Manual
VEHZ0676	Set of 3 x CP GB1 surge arrestors
VEHZ0677	Short circuiting bar (4 mm / 0.16 in, 19 mm / 0.75 in)
VEHK0678	Booster connection cable (6 m / 19.68 ft, 3 x 1.5 mm ²)
VEHK0652	Coax measurement cable (6 m / 19.68 ft)
VEHK0676	Cable set with Kelvin clamps (6 m / 19.68 ft, 6 mm ²)
VEHK0615	Grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm ²)
VEHP0063	Transport case CP CU1
X0000089	CPC Toolset DVD

CP Sequencer test card has to be ordered separately (Order No. VESM0635)

CP SB1 upgrade option (Order No. VEHZ0692)

Hardware CP SB1

Cables and accessories

VEHK0030	RS232 cable
VEHK0615	Grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm ²)
VEHK0690	Set of coaxial cables (15 m / 49.21 ft, 2,5 mm ²) on cable drum (red, blue, green, yellow)
VEHZ0691	Kelvin clamps (4 x 2 pcs)
VEHP0090	Transport case with wheels for CP SB1
VEHS0009	Flexible terminal adapters (12 pcs)
X0000089	CPC Toolset DVD

Additional accessories: CP SB1 Reference Manual, connection cables, backpack for accessories

Ordering Information

CP Transformer Test System (Order No. VE000645)

The test system consists of the following items:

Hardware

CPC 100
CP TD1

Software

VESM0600 CP Quick Card
VESM0620 CP transformer test cards
VESM0635 CP sequencer test card
VESM0665 CP TD1 test card
VESM0670 CPC editor software

Cables and accessories

VEHK0617 Optional high-current cable set (2 x 9 m / 29.53 ft)
VEHK0618 Optional high-voltage cable set (2000 V, 2 x 10 m / 32.81 ft)
VEHK0619 Optional measurement cable set (6 x 10 m / 32.81 ft)
VEHZ0610 Connection clamps for high voltage
VEHZ0620 Crocodile clamps
VEHK0622 Ethernet PC connection cable (3 m / 9.84 ft)
VEHK0623 Low voltage adapter
VEHZ0600 CP TD1 accessories
VEHS0006 Solid terminal adapters (12 pcs)
VEHP0062 Transport case with wheels for CP TD1
VESD0606 CP TD1 Reference manual
VESD0601 CPC 100 User manual
VEHK0615 2 x grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm²)
VEHP0061 Transport case with wheels for CPC 100
VEHP0069 Carry bag for CPC 100 accessories
VEHZ0644 TH3631 temperature/humidity measurement unit
VEHP0067 Transport case with wheels for CP TD1 accessories
X0000089 CPC Toolset DVD
VEHZ0665 CP SA1 Surge Arrestor box
VEHK0616,20,21,24 Power cord CPC
VEHZ0666 USB Memory Stick
VEHZ0678 Hot collar band
VEHZ0640 CP Trolley

CPC 100 Line Impedance Test System (Order No. VE000602)

The test system consists of the following items:

Hardware
 CPC 100
 CP CU1
 CP GB1

Software
 VESM0600 CP Quick Card
 VESM0635 CP sequencer test card
 VESM0670 CPC editor software

Cables and accessories

VEHK0622 Ethernet PC connection cable (3 m / 9.84 ft)
 VEHP0061 Transport case with wheels for CPC 100
 VEHK0615 2 x grounding cable (green / yellow) (6 m / 19.68 ft, 6 mm²)
 VESD0601 CPC 100 User manual
 VEHK0678 Booster connection cable (6 m / 19.68 ft, 3 x 1.5 mm²)
 VEHK0676 Cable set with Kelvin clamps (6 m / 19.68 ft, 6 mm²)
 VEHK0677 3-lead shorting cable (0.3 m / 11.81 in, 10 mm²)
 VEHZ0676 Set of 3 CP GB1 surge arrestors
 VEHZ0677 Short circuiting bar (4 mm / 0.16 in, 19 mm / 0.75 in)
 VEHK0652 Coax measurement cable (6 m / 19.68 ft)
 VEHZ0666 USB Memory Stick
 VESD0671 CP CU1 Reference Manual
 VEHP0063 Transport case CP CU1
 X0000089 CPC Toolset DVD

Step & Touch Voltage Set for CP CU1 (VEHZ0625)

Hardware
 VEHZ0626 FFT Voltmeter CP AL1 including CP AL1 Adapter and accessories

Cables and accessories
 VEHZ0627 Pair of foot electrode water cans (empty: 6 kg / 13.2 lbs each; filled: > 25 kg / 55.1 lbs each)
 X0000089 CPC Toolset DVD

Ground Impedance Set for CP CU1 (VEHZ0622)

Hardware
 VEHZ0623 Rogowski coil with a length of 1.90 m / 75 in - 20 / 200 A ranges
 VEHZ0624 Handheld eTrexH GPS navigation device for evaluation of distance

Cables and accessories
 6 cable reels (100 m / 328.08 ft, 0.75 mm², black) and 3 ground electrodes

Excellence through Education

OMICRON offers several training courses to become familiar with the CPC 100 and its accessories. Working in small groups customers practise using the CPC 100 primary test system and perform practical measurements on different test objects.

The training program provides customers with valuable expertise while serving real-life needs at the same time.

Expert trainers and dedicated training equipment with different test objects and models simulating every part of the substation in the classroom are the key to OMICRON's customer-oriented professional development.

General training contents

- > Operating philosophy of the CPC 100
- > Applying the general test cards
- > Working with the test cards
- > Preparing tests and documenting the measurement results efficiently with the PC software
- > Practical exercises on different assets
- > Introduction to CPC 100 accessories

Scheduled training

The training courses regularly take place at the OMICRON Training Centers all around the world.

Customized training

In case of specific customer requirements OMICRON also offers customized on-site training courses. These training courses can take place at the customer's premises or at the substation.

Webinars

This form of training reduces down time and expense for customers. Customers can sign in for OMICRON's webinars and participate in an easy and comfortable way from their desk.

Detailed information about all training courses and dates offered can be found on the OMICRON website:

OMICRON is an international company serving the electrical power industry with innovative testing and diagnostic solutions. The application of OMICRON products allows users to assess the condition of the primary and secondary equipment on their systems with complete confidence. Services offered in the area of consulting, commissioning, testing, diagnosis, and training make the product range complete.

Customers in more than 140 countries rely on the company's ability to supply leading edge technology of excellent quality. Broad application knowledge and extraordinary customer support provided by offices in North America, Europe, South and East Asia, Australia, and the Middle East, together with a worldwide network of distributors and representatives, make the company a market leader in its sector.

The following publications provide further information on the solutions described in this brochure:
